

Methods

More available routes for students

Clearer indication of when students should or shouldn't cross

Website or app that displays or calculates optimal routes to avoid traffic

More measures to make sure students don't cross when not permitted

Reasoning

Heavy traffic can slow down a student's route through the campus

Sometimes crossing availability isn't indicated unless the crossing button has been pressed

Jaywalking students or pedestrians can pose a threat to themselves and drivers

Sometimes walk signals directly indicate pedestrians to cross as traffic is given the green light through that road

Limitations

Road infrastructure

Budget

Traffic frequency

Necessity

Target Groups

On-campus students

Student drivers

Other drivers

Other pedestrians
